

Manage and store all your JAVS recordings and links in one place!

Centralize session information with Server 7.

Our Server 7 enterprise database management solution allows you to connect all of your JAVS Premier locations together.

This software-based solution integrates session information, so all recordings pass from location to location with all information intact. This centralized database allows for greater management of redundancy, failover, and backup. With all user and group settings stored at the server level, you can easily set up user rights for the entire network.

Server 7 seamlessly integrates with BookShelf 7, an Enterprise-Level Session Archive solution designed specifically for JAVS Suite 7.

We also recommend adding Finder 7 to your solution! Finder 7 is a web-based search utility that allows authorized users to locate specific recorded sessions. Sessions can be searched quickly by entering multiple criteria. A thumbnail of the video is presented to allow the user to quickly identify if it is the record they're searching for.

FEATURES

**SOFTWARE ONLY
(USE YOUR HARDWARE)**

**CENTRALIZED
INFORMATION, USER
GROUPS AND SETTINGS**

**SCHEDULING AND
SELECTIVE ARCHIVAL WITH
EMAIL NOTIFICATIONS**

**MANAGEMENT OF
REDUNDANCY, FAILURE,
