

A customizable A/V viewing solution.

Viewing your recorded media has never been easier!

Looking for a customizable audio/video viewing solution that can be easily adapted for any viewing scenario? Viewer installs on a desktop or laptop and works seamlessly with NoteWise, our audio recording software.

The visually-based interface of Viewer displays a graphic representation of the recorded media. Audio blocks representing each recorded channel are imposed on a timeline. Information can be logged automatically from NoteWise or entered manually.

Use Viewer's user-friendly playback controls to rewind, play/pause, or fast forward the recording. Mark in and out with foot pedal controls. Grab snippets of recordings to save them as new files. You can even include a PDF or JVL report that details logging information with each saved file.

FEATURES

**TRANSCRIPTION TOOLS
INCLUDING FOOT PEDAL
CONTROLS AND MARK IN/OUT**

**AUDIO BLOCKS
ON VISUAL TIMELINE**

**AUTOMATIC AND/OR
MANUAL LOGGING**
