

## Take control of the JAVS Recorder with AutoLog 7.

### An easy way to control your JAVS Recorder

Now you can start and stop one or more JAVS Recorders from any network-connected computer. You can even playback while still recording. This easy-to-use session logging and control software allows you to create a log of events and generate notes for each one, remarking on people involved and exhibits used.

Not only can AutoLog 7 allow you to control the Recorder, but you can also control and monitor the JAVS Centro processor for things like A/V feed, audio levels, and record status.

We realize security is of the utmost importance. That's why AutoLog 7 lets you seal and unseal sessions, assign sessions to different departments, and switch to private record mode at any time.

## FEATURES

**PLAYBACK WHILE RECORDING**

**RECORDER/ROOM CONTROL FROM ANYWHERE ON THE NETWORK**

**ROLE-BASED RIGHTS & ACCESS**
